

Appendix : Version Info

Overview

If you want to know version information of kobuki for compatibility checking and introspection, you can just run version_info program.

Build

If you build kobuki_driver package, the version_info program will be built automatically. Source code is located at [src/tools/version_info.cpp](#)

See also:

[Installation - Linux](#)

Before running

Before the running the version_info program, make sure that robot is connected and appeared as /dev/kobuki. See [kobuki_ftdi](#) for more detail.

```
$ ll /dev/kobuki
lrwxrwxrwx 1 root root 7 Jan 25 18:19 /dev/kobuki -> ttyUSB0
```

Running

The version_info program retrieve and print the version information of kobuki, including hardware, firmware and software version numbers. And Unique Device Identifier(UDID) also.

```
$ ~/kobuki_core/install/lib/kobuki_driver/version_info
Version Info:
* Hardware Version: 1.0.4
* Firmware Version: 1.2.0
* Software Version: 0.5.2
* Unique Device ID: 736034612-892621875-1125147971
```
